

VALED

Every student learns like the best.

The AI-native tutor for high-stakes exams —
first pilot: Portugal's Matemática A.

01 · VALED AT A GLANCE

Building the **category winner** in AI-native exam prep.

Students

An elite tutor, always available — and it never gives the answer.

Live projected exam grade — moves with every session

THE PLATFORM

One platform connecting **students**, an **AI ink tutor** and **human tutors** — built exam-first, for any high-stakes exam.

Tutors

Earn more per hour — every session starts from the student's mastery map. Zero time diagnosing.

Marketplace built — sessions, wallet, payouts

Everywhere, one exam decides a future. The help is **expensive and unequal**.

\$70B_{/yr}

spent worldwide on exam prep — from school gatekeepers (SAT, A-levels, Bac) to professional ones (GMAT, CFA)

PILOT MARKET · PORTUGAL

38,733 sat Matemática A in 2025 — our wedge, the #1 gatekeeper to university

€300M/yr private tutoring market, all subjects

1 in 3 secondary students has a tutor — €126/month average

- **The best help is scarce.** Booked out, big-city, expensive — €20–40/h for school exams, €1,000+ for GMAT or CFA.
- **Access follows income.** The families who most need help pay proportionally more — or go without.
- **Free AI made it worse.** ChatGPT hands students the answer — completion, not mastery.

A tutor that teaches like the best — and never gives the answer.

1

Socratic by design

Never reveals the answer, at any hint level. Finds the one wrong step, asks the one right question.

2

Exam-native

Every lesson is reverse-engineered from the real exam — question by question, trap by trap. 18 official papers in-product.

3

Handwriting-native

The exam is on paper, so Valed is too. Students solve by hand; the tutor reads and marks their actual ink.

	TODAY	WITH VALED
Cost of expert help	€20–40 / hour	→ included, unlimited
Availability	1 h/week, if you find one	→ 24/7, on every question
Feedback on written work	at the next session	→ seconds, on the student's own ink
Knowing if you're ready	a surprise on exam day	→ a live projected grade /20

Students write by hand. Valed tutors on their ink.

Solve in $\mathbb{R}$: $2x^2 - 5x + 2 = 0$

$$a = 2, b = -5, c = 2 \quad \checkmark$$

$$\Delta = 25 - 16 = 9 \rightarrow \sqrt{\Delta} = 3 \quad \checkmark$$

$$x = \frac{5 \pm 3}{2}$$

$$x = 4 \vee x = 1$$

VALED · INK TUTOR

Check the denominator: the formula divides by **2a**, not 2.
What is 2a here?

Every mark is drawn on the student's own handwriting — and verified against it.

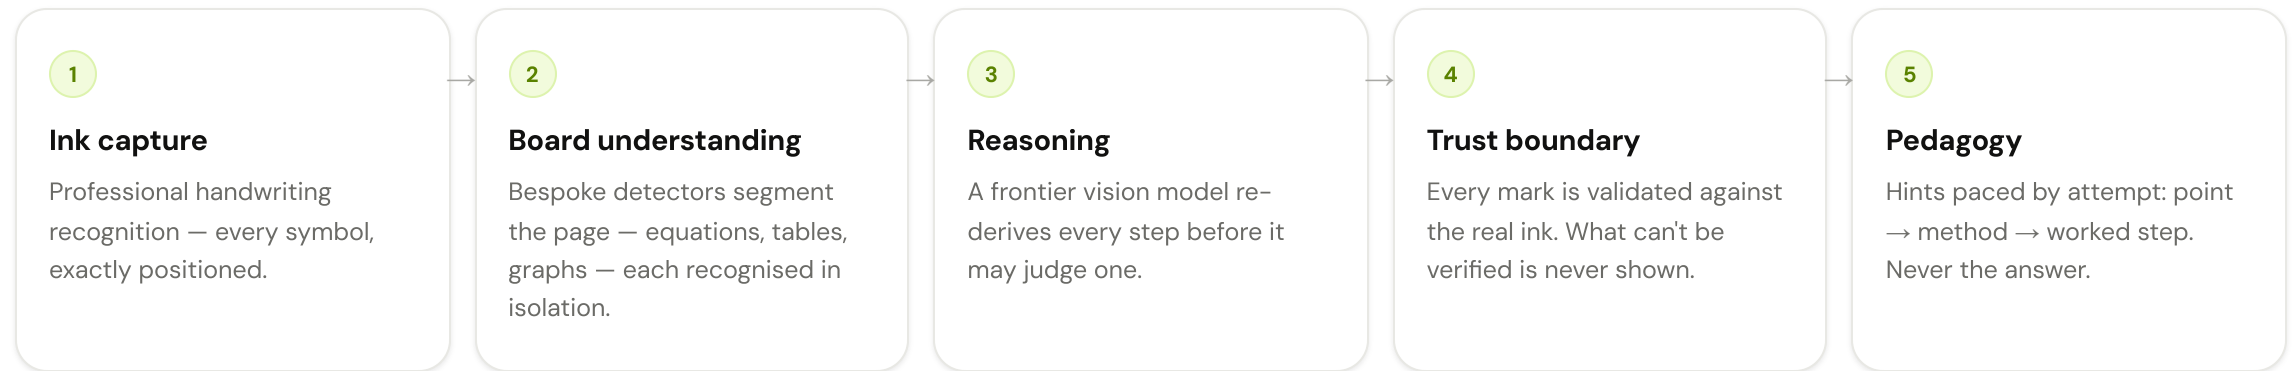

- **Reads the whole page** — equations, tables, sketched graphs — like a human tutor.
- **Finds the first real error** — the cause, not the symptom. It re-derives every step before flagging one.
- **Marks the ink** — a check, a circle, a highlight — then asks one Socratic question. The final answer never comes.
- **A hard trust boundary.** The model proposes; the server verifies against the real ink. Hallucinated feedback is structurally impossible.

EVERY STROKE UPDATES A LIVING MAP OF THE STUDENT

solve by hand → exact error diagnosed → mastery graph updates → projected exam grade moves → next best skill

We have not found anything like this on the market.

Not a ChatGPT wrapper. A verified reasoning pipeline.

Built like infrastructure — circuit breakers, model tiering, a costed roadmap to cut inference cost 40–60%.

This product was impossible eighteen months ago.

1

AI can finally do math

Frontier models now reliably verify multi-step handwritten math — and inference costs keep collapsing.

2

Students already moved

Students use ChatGPT daily — for answers. Parents and schools want mastery. The shift happened; the pedagogy didn't.

Exam prep is a ladder. Each rung uses the same machine.

NOW

Matemática A, Portugal. ~40k students/yr; inside a €300M national tutoring market.

NEXT

Every Portuguese national exam. All subjects, all years — on the same platform.

THEN

High-stakes exams globally. PAU, Maturità, Bac, A-levels, SAT — every country has one.

GOAL

Beyond school: GMAT, CFA, certifications. Adults pay €1,000–3,000 per prep course.

\$70B_{/yr}

global exam-preparation & tutoring market, 2025

- **The machine is reusable** — the same architecture ports exam by exam.
- **Handwriting is universal** — quantitative exams are worked on paper everywhere.
- **The wedge proves the model** — one national cohort at a time.

Subscription for the AI. **Take-rate** on the humans.

RECURRING

Student subscription

Unlimited AI tutoring, all lessons, exam simulation and the live projected grade.

€126/mo what families pay today for ~1 hour of
tutoring per week

Valed prices at a fraction of that — and it never sleeps. Inference cost is engineered like COGS; margins scale like software.

MARKETPLACE

Live tutor sessions

Vetted tutors sell 1:1 and group sessions inside Valed — each starts from the student's mastery map. Zero time diagnosing.

Valed takes a cut of every session. Wallet and payouts already built.

The flywheel: AI data makes tutors better → tutors bring students → students feed the AI.

Everyone gives answers. Nobody teaches.

	EXAM-NATIVE	READS HANDWRITING	NEVER GIVES THE ANSWER	PREDICTS EXAM GRADE	ALWAYS AVAILABLE	AFFORDABLE

The ink stack.

Recognition + segmentation + verified marking — months to replicate.

The misconception catalog.

1,000+ coded error patterns, compounding with every student.

Exam-parity content.

Machine-gated authoring keeps every lesson true to the real exam.

The marketplace flywheel.

Tutors distribute the product; the product makes them better.

The product is built. Schools are booked.

Full product, built in-house. Ink tutor, 179 lessons, exam simulator, diagnostics, live sessions, tutor marketplace — shipped by the founding team.

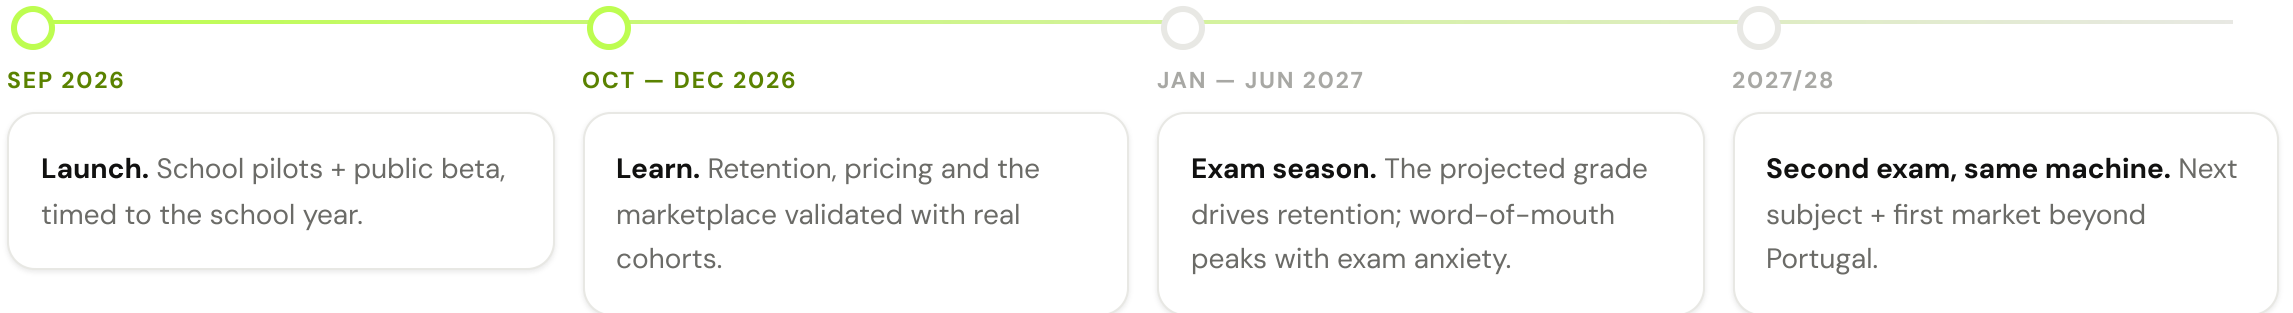

Private schools engaged. Interest confirmed; follow-ups booked for the start of the 2026/27 school year.

Launch with the school year. School pilots + public beta in September; first full exam season June 2027.

Launch with the school year. Peak with the exam.

Two founders. The whole product, built in-house.
